

**You've heard it time and again: "They just don't make them like they did in the old days."**

Today's consumers have learned to settle for products of inferior quality. When it comes to pre-constructed barns, Horizon Structures is proud of its old world standards in the Amish tradition. Think simple, practical craftsmanship. Think straightforward, personal customer service; think a real person answering the phone. Think an interactive website that allows online service; requests for quotes; a price estimator for the structure you envision; and valuable links to trade shows and locations where our buildings can be viewed. Examine color choices and photos of various structures.

Horse owners today are finding that pre-built barns by Horizon Structures offer unbeatable benefits: \*affordability \*shorter lead time (weeks not months) \*fully assembled product for immediate accessibility \*consistent quality by Amish craftsmen \*structures that can be moved around your property or to a new location \*permitting, insurance, and tax benefits for non-permanent structures (depending on local laws).

At Horizon, we take customer feedback seriously. Over the years, we have modified and added features based on our consumer surveys at leading trade shows. With our network of Amish workshops, we can introduce changes quickly and efficiently.

When it comes to product, the choices are yours. Do you want one stall or 20 (limited only by acceptable transport sizes); solid pine or Duratemp siding (both of which have solid oak kick board); open window styling with bars or sliding glass with steel bars over the window for protection; one window or two

windows per stall; larger or smaller windows; side windows or windows all around; a metal mesh door or a wooden Dutch door? Your ability to customize is practically unlimited.

Of course, all structures are designed with horse safety and comfort features. You don't have to worry about whether the kick board is high enough, the walls strong enough, or the doors large enough. Our design concept is based on centuries of knowledge and fine craftsmanship.

Furthermore, we encourage our customers to be creative in designing personalized layout, for example, choosing a single barn with an overhang or possibly creating a center aisle barn by setting two barns parallel and using a truss system to create a single roof (\*call to verify availability of this option in your area). Horizon provides detailed site prep and layout information and personal guidance when needed.

In response to customer questions, Horizon Structures has published *The Perfect Barn: What You Need to Know* by Jill Siragusa, sales and marketing manager. This publication provides consumers with valuable, up-to-date information on barn design and construction in today's market.

Educate yourself. Visit our website at [www.horizonstructures.com](http://www.horizonstructures.com) or call us at 1-888-447-4337 for friendly customer service without the hard sales pitch.

Take a look. You'll like what you find.

Florida customers can view one of Horizon Structure's barns at Overlook Farm Eventing in Ocala. Call Julie at 352-342-5685 or go to [www.overlookfarm-eventing.com](http://www.overlookfarm-eventing.com). Or visit the Jacksonville Equestrian Center to see our model on display.
